

Question1

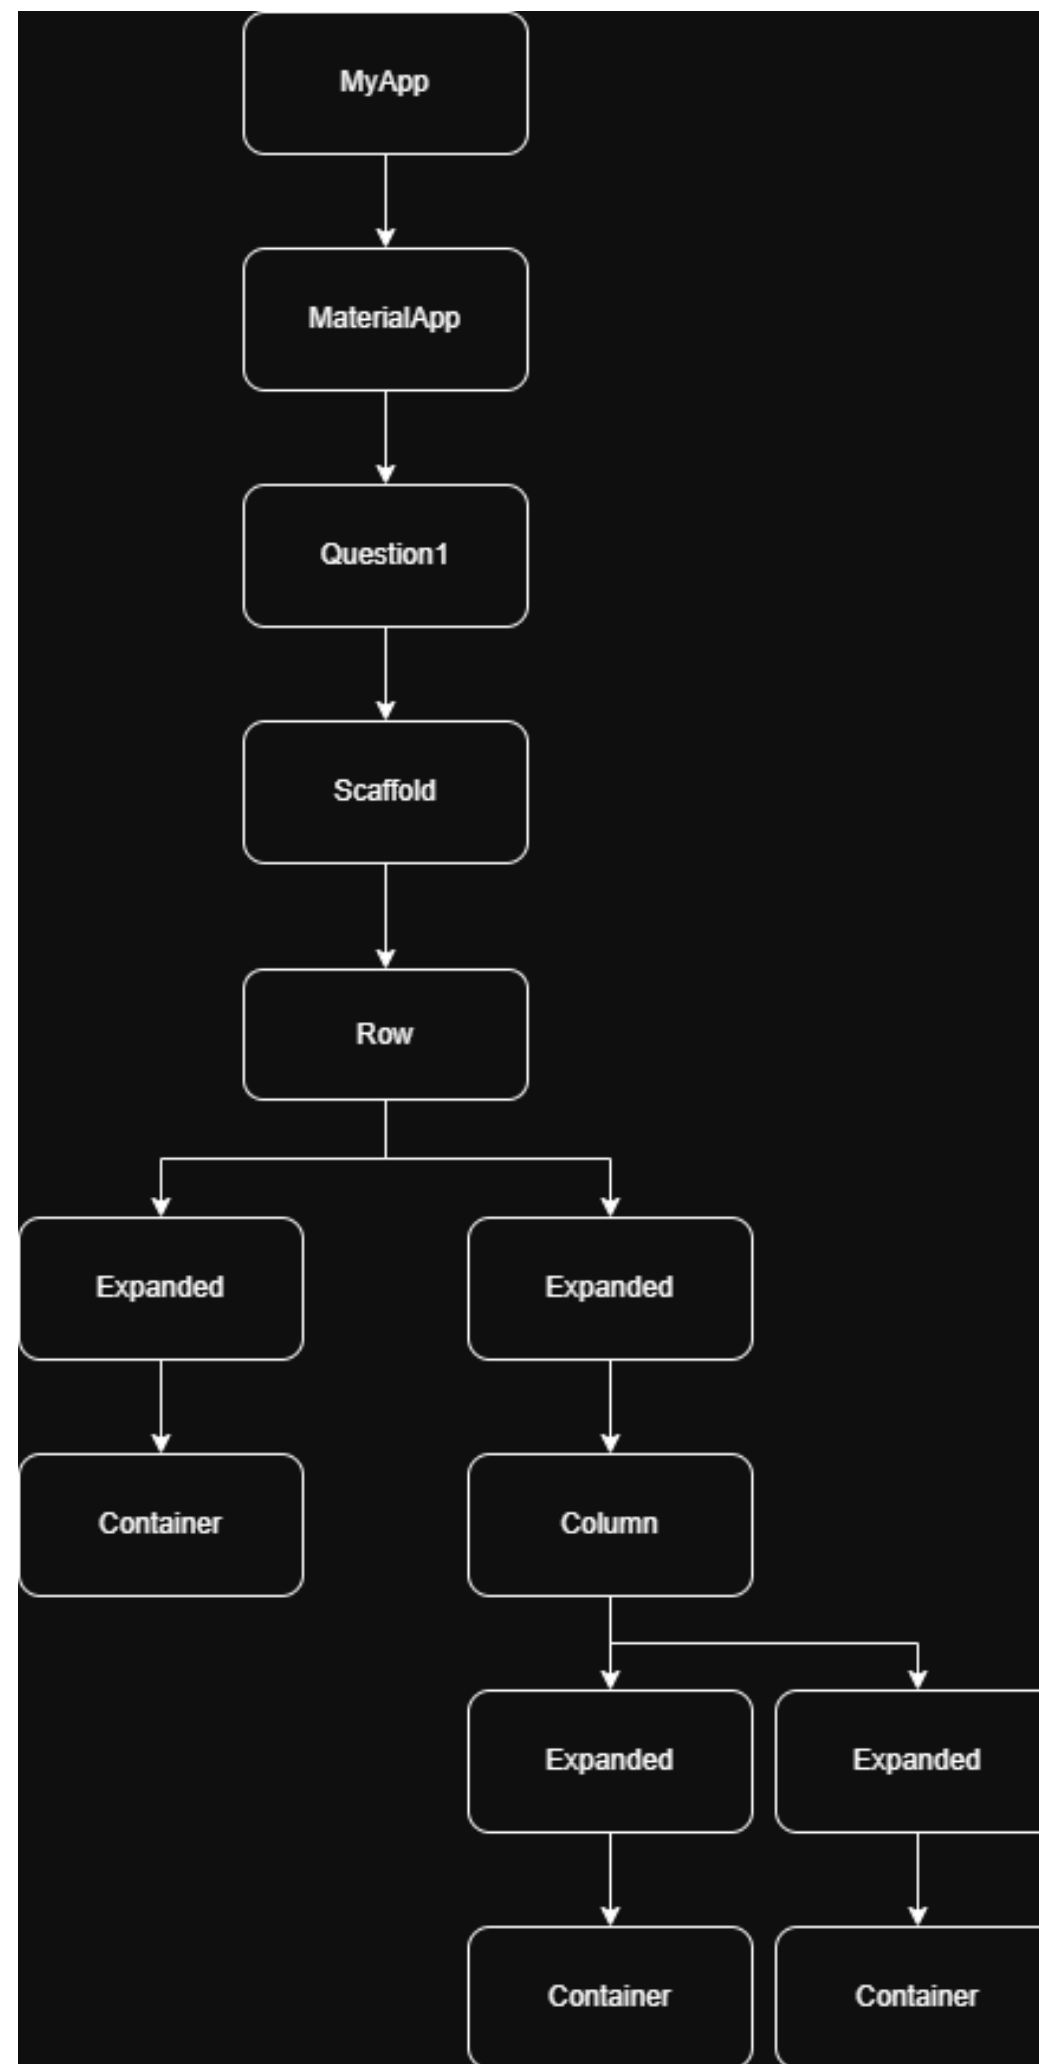

```
1 class Question1 extends StatelessWidget {
2   const Question1({super.key});
3
4   @override
5   Widget build(BuildContext context) {
6     return Scaffold(
7       body: Row(
8         children: [
9           Expanded(child: Container(color: Colors.yellow)),
10          Expanded(
11            child: Column(
12              children: [
13                Expanded(flex: 2, child: Container(color: Colors.deepOrange)),
14                Expanded(child: Container(color: Colors.green)),
15                Expanded(child: Container(color: Colors.purpleAccent)),
16              ],
17            ),
18          ),
19        ],
20      ),
21    );
22  }
23 }
```

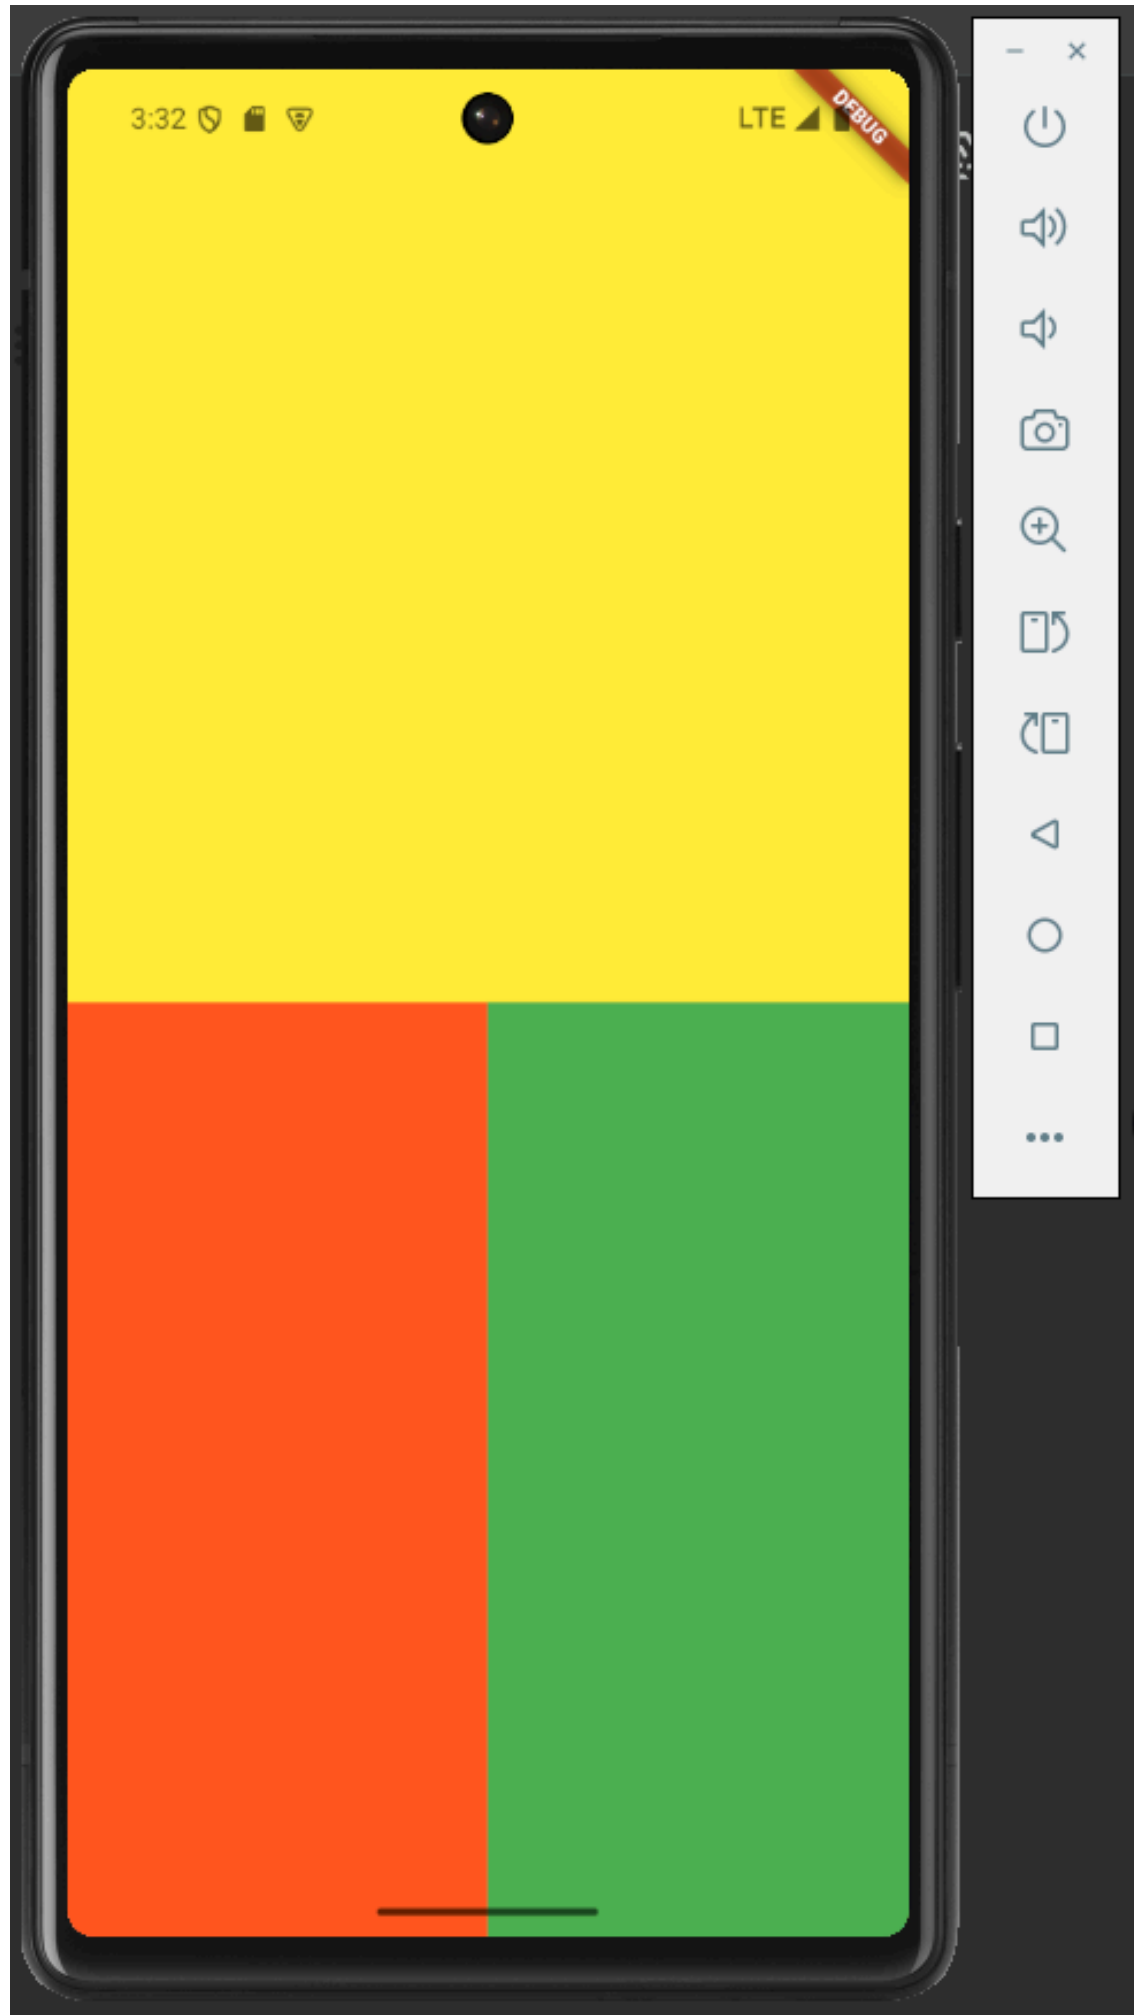

Question2

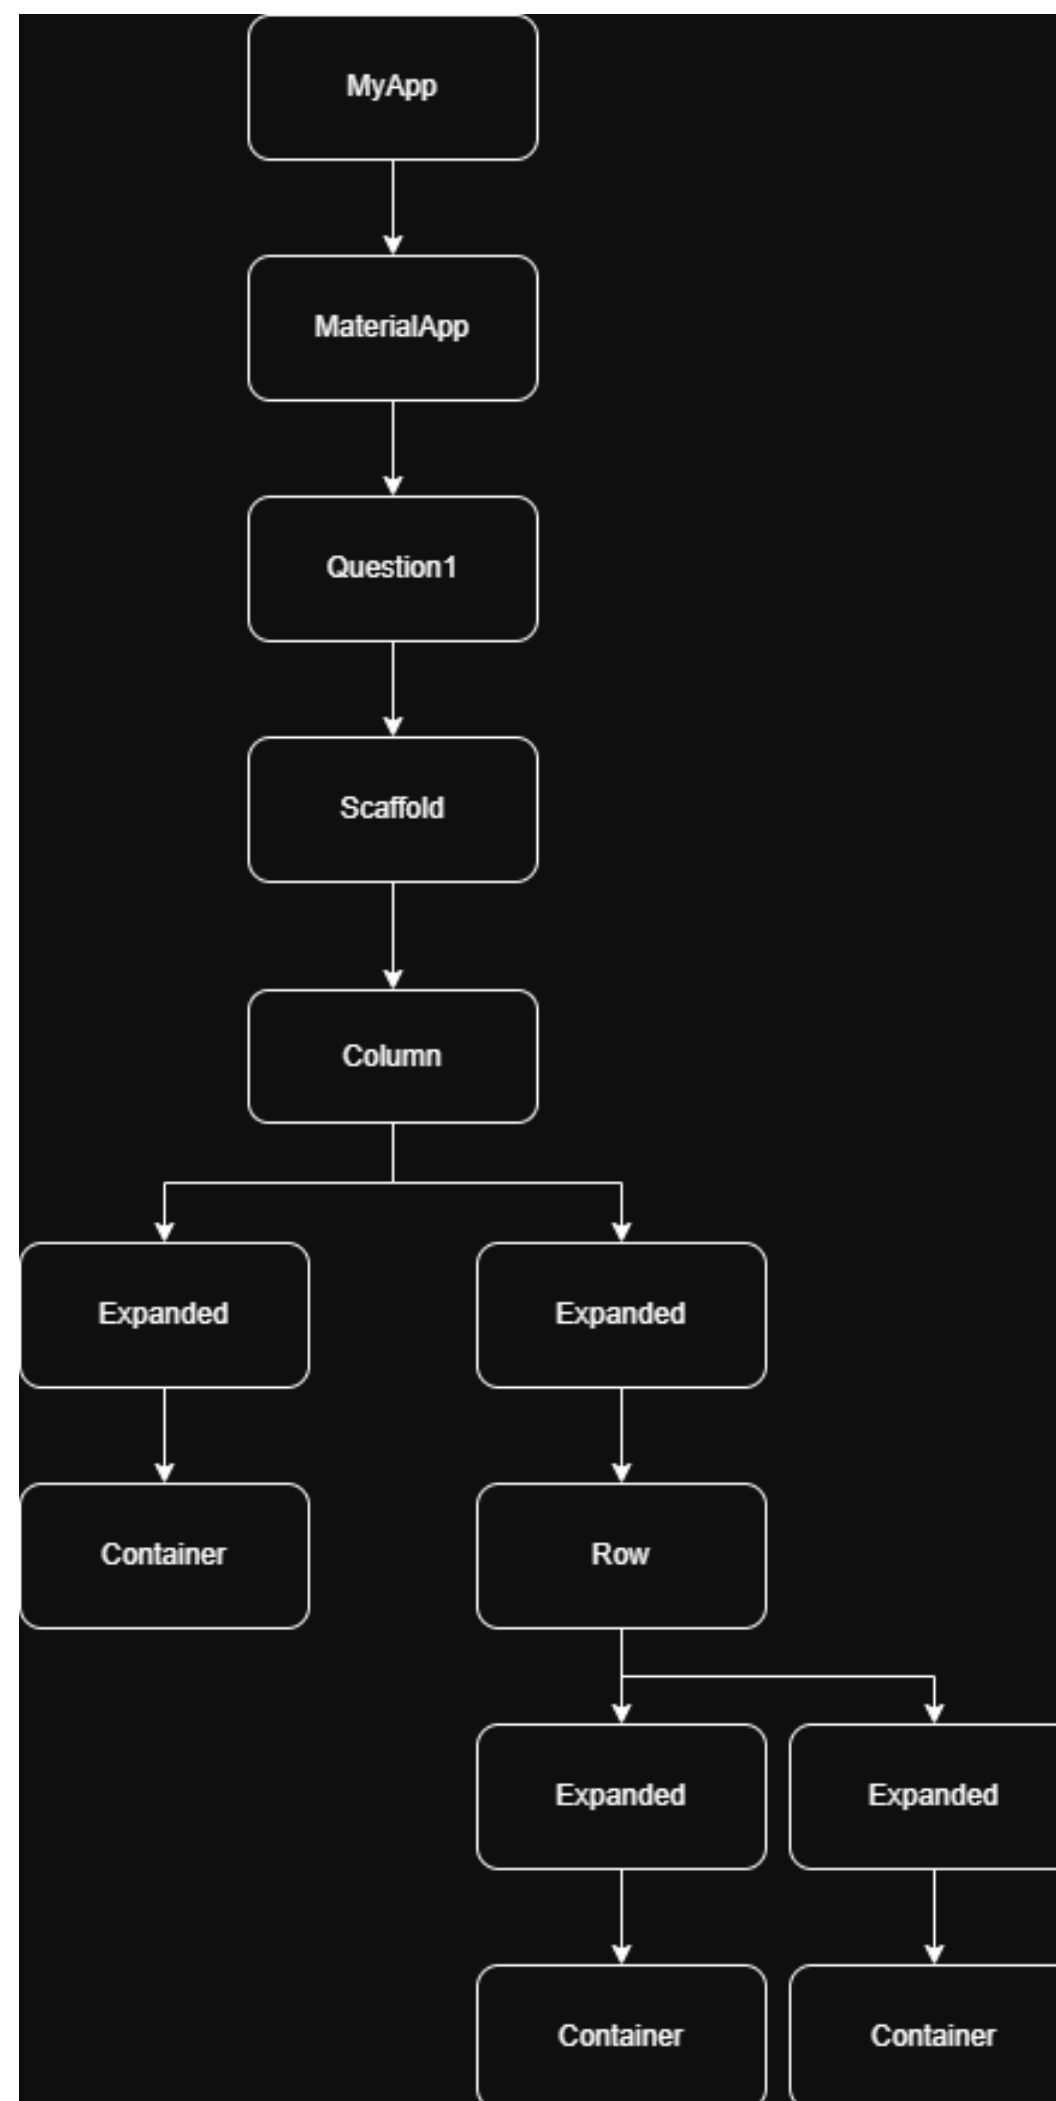

```
1 class Question2 extends StatelessWidget {
2   const Question2({super.key});
3
4   @override
5   Widget build(BuildContext context) {
6     return Scaffold(
7       body: Row(
8         children: [
9           Expanded(child: Container(color: Colors.yellow)),
10          Expanded(
11            child: Column(
12              children: [
13                Expanded(child: Container(color: Colors.deepOrange)),
14                Expanded(child: Container(color: Colors.green)),
15              ],
16            ),
17          ),
18        ],
19      ),
20    );
21  }
22 }
```

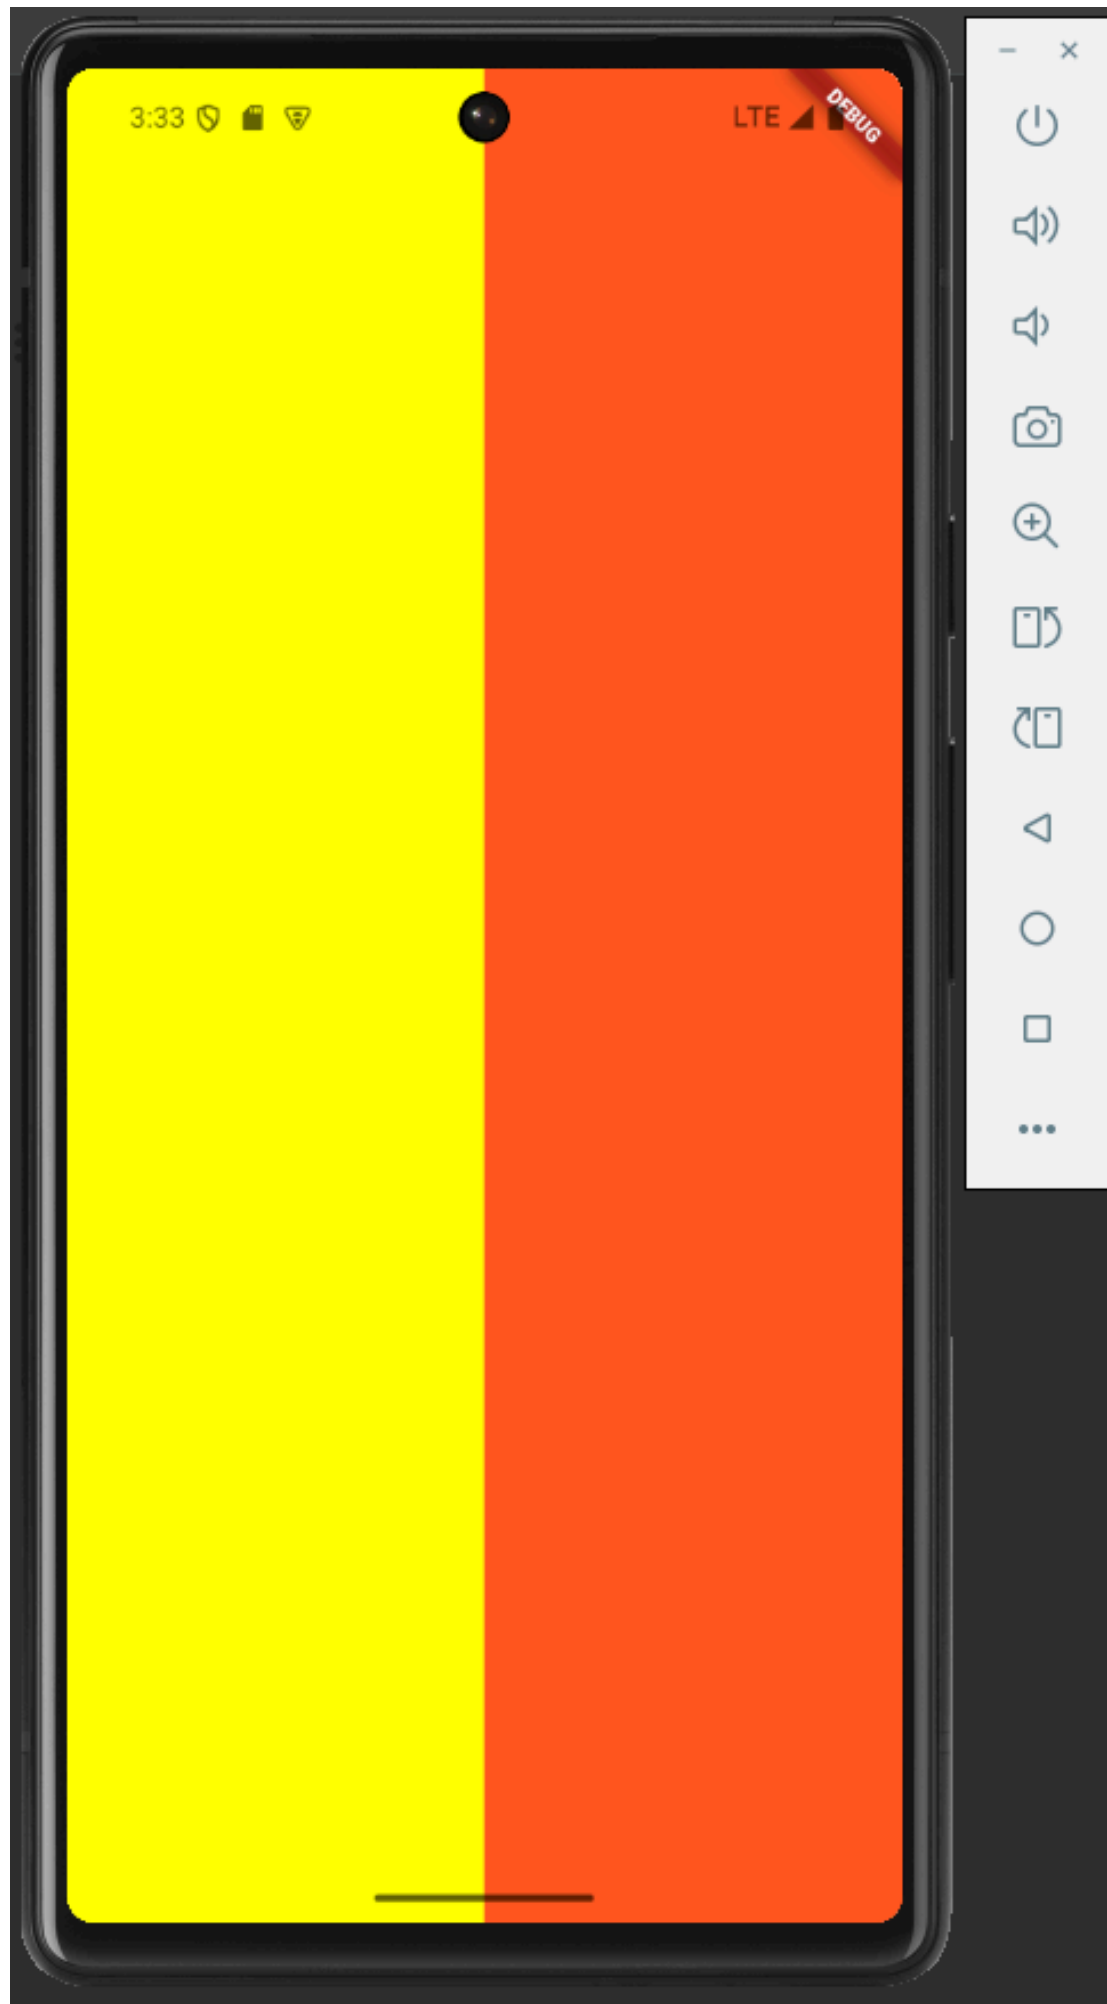

Question3

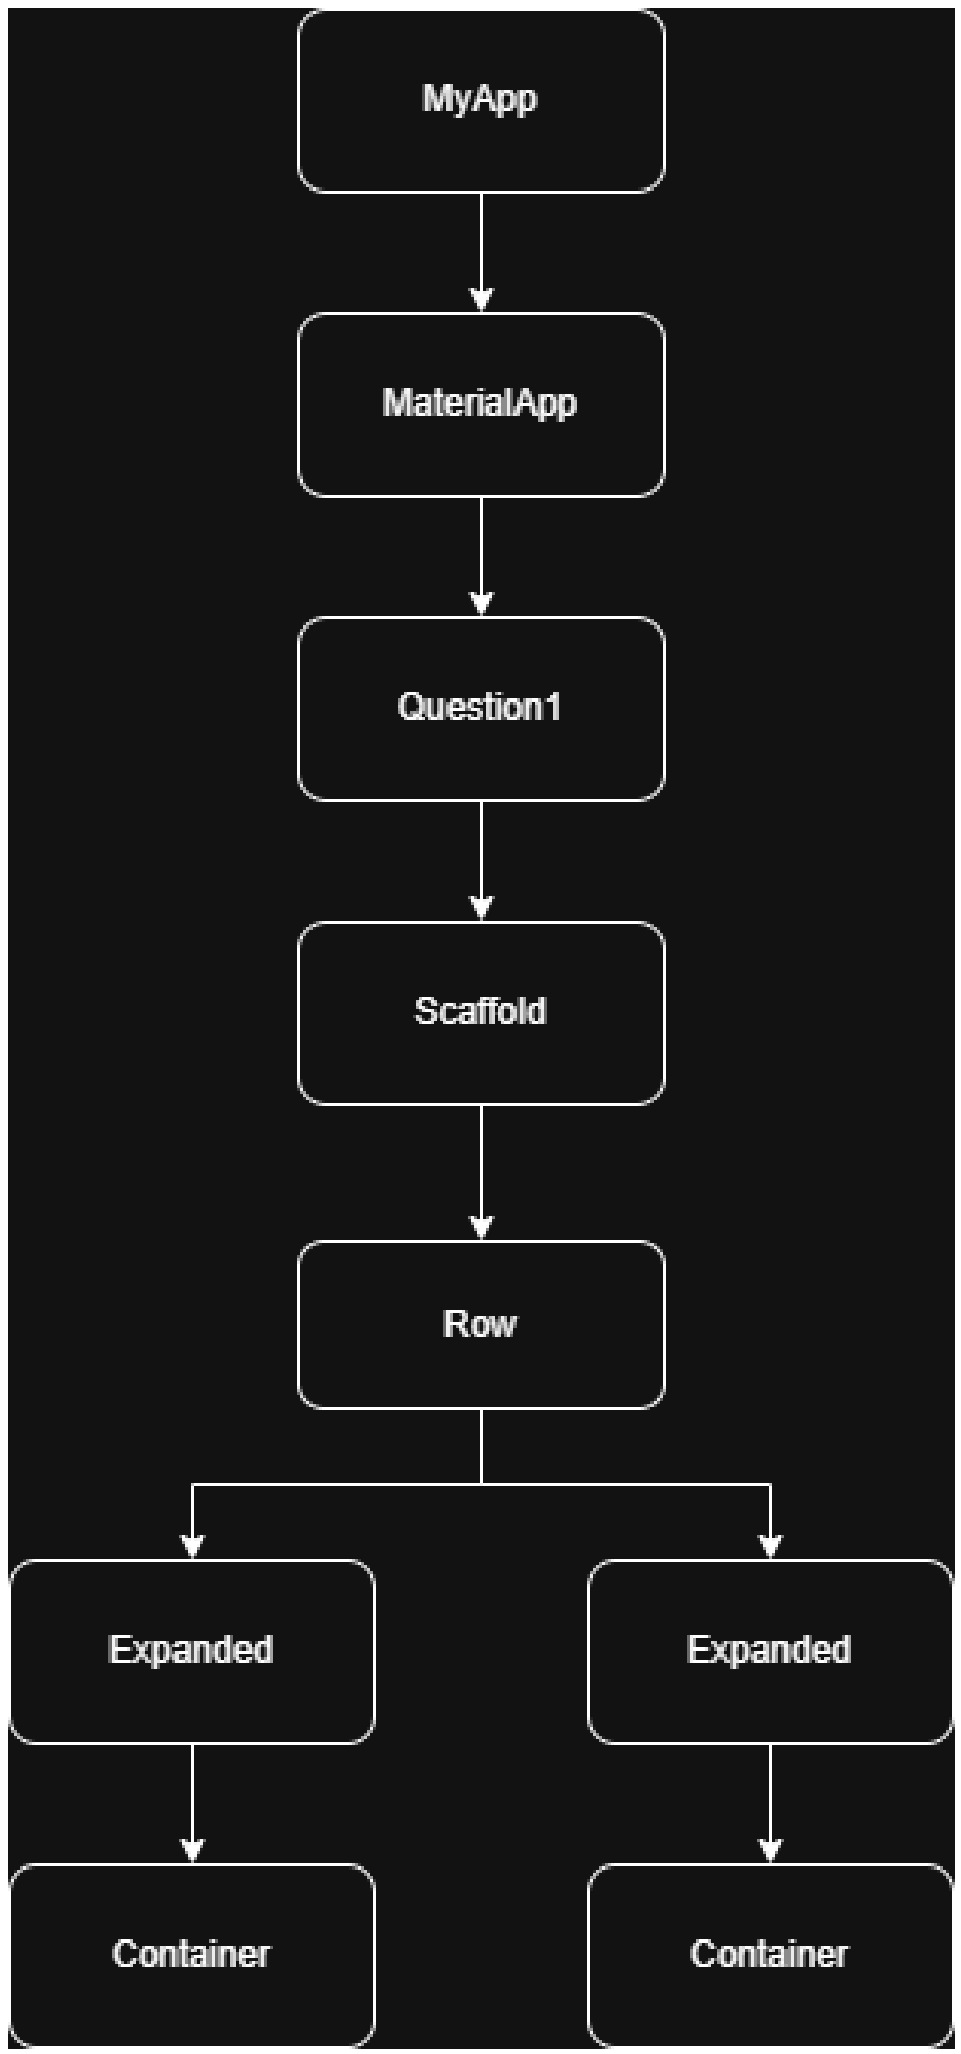

```
1 class Question3 extends StatelessWidget {
2   const Question3({super.key});
3
4   @override
5   Widget build(BuildContext context) {
6     return Scaffold(
7       body: Column(
8         children: [
9           Expanded(child: Container(color: Colors.yellow)),
10          Expanded(
11            child: Row(
12              children: [
13                Expanded(child: Container(color: Colors.deepOrange)),
14                Expanded(child: Container(color: Colors.green)),
15              ],
16            ),
17          ),
18        ],
19      ),
20    );
21  }
22 }
```

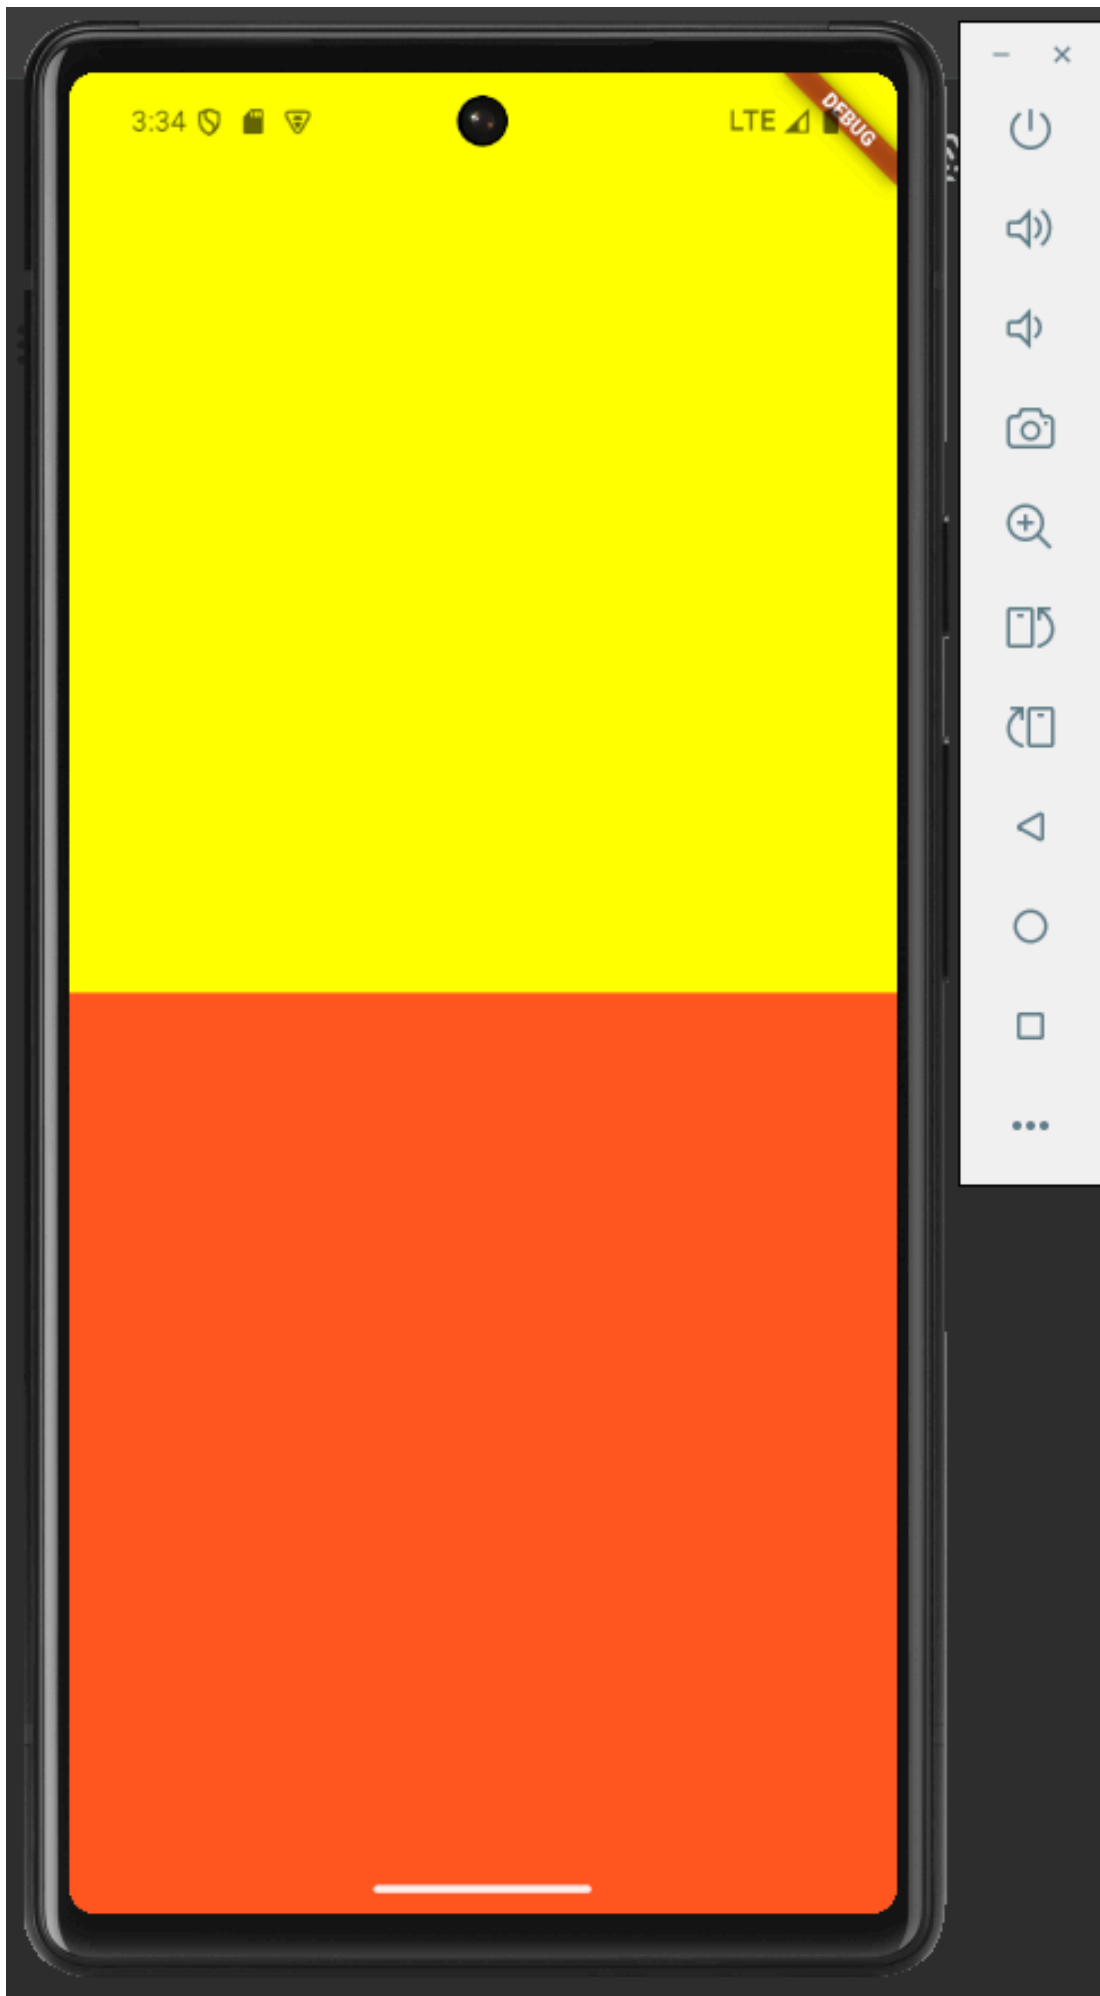

Question4

```
1 class Question4 extends StatelessWidget {  
2   const Question4({super.key});  
3  
4   @override  
5   Widget build(BuildContext context) {  
6     return Scaffold(  
7       body: Row(  
8         children: [  
9           Expanded(child: Container(color: Colors.yellowAccent)),  
10          Expanded(child: Container(color: Colors.deepOrange)),  
11        ],  
12      ),  
13    );  
14  }  
15 }
```

Question5

```
1 class Question5 extends StatelessWidget {  
2   const Question5({super.key});  
3  
4   @override  
5   Widget build(BuildContext context) {  
6     return Scaffold(  
7       body: Column(  
8         children: [  
9           Expanded(child: Container(color: Colors.yellowAccent)),  
10          Expanded(child: Container(color: Colors.deepOrange)),  
11        ],  
12      ),  
13    );  
14  }  
15 }
```
